DETAILED ACTION

Allowable Subject Matter

1. Claims 1-11 are allowed.
2. The following is an examiner's statement of reasons for allowance:

With respect to the independent claims 1, 2, and 7, prior art fails to disclose or make obvious a nanoscale standard sample and method of its manufacture, comprising a sample base on which a chip having a diffraction grating pattern formed thereon is attached, wherein the chip is provided with an indicator permitting the direction of the diffraction grating pattern to be determined from the external appearance of the indicator. Prior art fails to disclose any electron microscope nanoscale sample chips having a diffraction grating formed on the chip while also having an indicator which shows the direction of the diffraction grating from the appearance of the indicator.

The dependent claims 3-5, 6, and 8-11 are allowable by virtue of their dependence upon the independent claims 1, 2, and 7, respectively.

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Rangarajan et al. (6,573,498 B1, 6,573,497 B1) and Singh et al. (6,570,157 B1) disclose a system and method for calibrating a scanning electron microscope (SEM) comprising measuring an electrical characteristic of a calibration standard reference sample feature.
4. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue
